# BIG THINGS DUE FROM COMPANY

Amalgamated Nevada Mines and Power Rights Are Visited by Directors.

STRONG PEOPLE ARE NOW IN THE SADDLE

Water Rights Very Extensive and Among the Most Valuable Assets.

Since powerful Eastern capital sesured the Amalgamated Nevada Mines and Power company, diligent effort has been made in closing out all obligations due from the organization and in placing the company into shape for active business. The general attractiveness and splendid promise of the proposition found little trouble in impressing the talent that has taken hold, and more an investigation of the remainder. and upon an investigation of the prop-erties owned by the company several directors have returned more impressed than ever with the whole plan. W. F. Snyder, of Salt Lake and New York, Frank M. Foote, of Evanston, Wyo, and John W. Cawley, of Boston, all directors of the Amalgamated company, are now in Salt Lake after having made a visit to the properties in Nevada.

made a visit to the properties in Nevada.

When seen by The Tribune Saturday morning, Mr. Cawley stated that the visitors in every way were pleased with the results of their trip. The Amalgamated company has on its hands an ideal mining and power proposition whose magnitude naturally requires time that everything may be shaped as are due its merits. He points out that the organization owns several different groups of quartz properties out that the organization owns several different groups of quartz properties in White Pine county. Nev.; a great placer proposition, and a magnificent amount of water for mining, milling and power purposes, and to bring together the ragged ends will require both time and money.

Among the water rights owned by the company are eight or nine creeks.

Among the water rights owned by the company are eight or nine creeks, the principal ones being South Weaver, Baker, Lehman, Williams, Snake and Strawberry creeks. From photographs of these streams it is apparent that the water rights are among the most valuable assets of the company, for there is more than enough to supply all the company's demands, and to send a great amount of electrical power into the mining camp of Ely, whose demands for the same within a short time will be almost unlimited. be almost unlimited.

be almost unlimited.

The Amalgamated company owns the San Pedro, the control of the Mabel, the California, Cyclone and the Buchsanan mines in White Pine county, the proporties whose developments last year started the rush into the Black Horse section of that State. There has been considerable work done upon these groups, and much very high grade gold ore has been sent into the ore markets. There are sixty claims in all in these properties, and while not a great deal of development work has been done in proportion to the acreage, sufficient has been accomplished to convince the officials of the organization that they have the making of a great big producer. This will require a large amount of equipment, including a stamp mill, the capacity of which is to be gauged according to the developments upon the according to the developments upon the claims. This work of opening the mines is being done at present, and be increased as soon as advan-

Mr. Cawley points out that the Amalgamated company is the owner of 1700 acres of Osceola gold placer ground, from which, in the earlier days of acacres of Osceola gold placer ground, from which, in the earlier days of activity, there came a liberal amount of the yellow metal to a limited amount of effort. The gold is very pure and coarse, and he pronounces it the greatest and most promising placer proposition he has ever seen. The company has men at work at this time making repairs to the West Ditch, a water avenue sixteen miles in length, bringing the waters of Williams creek to the scene of requirements. It will take the balance of the present senson to place the various ditches into proper form, but by the coming spring everything is expected to be sufficiently in readiness to admit of washing gold from the gravel. Six giants are now on the property, and installation of same will be made quickly at the logical moment. The company has an ideal natural dam site which will be improved by it in time for use the complish even greater things than the office.

The company is preparing to accomplish even greater things than the officials are willing at this time to divulge, as one who appreciates how extensive are these interests can see. While the properties are removed from railroad facilities at this time about seventy miles, there is far too much railroad talk for White Pine county to doubt that a line will be within easy reaching distance of these enterprises by the time things are humming as they should. Among those who accompanied the directors upon the inspection trip just ended were Grant Snyder, manager of the copper properties controlled by the National Development company, and H. S. Anderson, an electrical engineer of New York.

The newly organized Amalgamated The company is preparing to accom-

company, and R. S. Anderson, an electrical engineer of New York.

The newly organized Amalgamated Nevada company has the following officials: President, W. N. Johnson, manufacturer, Manchester, N. H.; vice-president, John I. Mathias, banker, Mahanoy City, Pa.; treasurer, Charles N. Prouty, shoe manufacturer, Spencer, Mass.; secretary, Merrill A. Smith, Boston. The board of directors is made up of the following gentlemen: W. N. Johnson, John I. Mathias, Charles N. Prouty, Merrill A. Smith, W. F. Snyder, Salt Lake; W. J. Calkins, New York city; Frank M. Foote, Evanston, Wyo.; John C. McGuire, Brooklyn; C. O. Eflingwood, New York city; Ernest R. Woolley, Salt Lake, and John W. Cawley, Boston.

## SHOULD SPREAD THE **NEWS OF TONNAGES**

Utah Citizens Have Opportunity to Spread the Gospel of Resources.

Now that Bingham is approaching by swift strides its legitimate era of tremendous production and prosperity, those who appreciate the real merits of Bingham mines deem it highly proper for Salt Lake and Utah generally to know something about the resources of the camp. Everyone should know the available tonnages of the leading mines of that camp, tonnages that have been placed in sight on merely a portion of the properties affected, for they demonstrate that Bingham has at least two mines whose individual visible copper ore supply is greater than all Butte combined. These two mines are the Utah Copper and the Boston Consolidated.

dated.

Figuring the ore of the Utah Copper company at 1½ per cent copper to the ton, this company has blocked out in sight a total of 40,000,000 tons; or figuring the values at 1½ per cent to the ton, taking no assay of a sories of many hundred that falls below that estimate, the company has in sight a grand total of 100,000,000 tons of ore. The Boston Consolidated company has blocked out in sight, on a portion of its Bingham possessions a total of 58,000,000 tons of ore, whose average copper contents are

possessions a total of 58,000,000 tons of ore, whose average copper contents are L56 per cent. The whole of Butte has only an estimated tonnage twice as great as the above two Bingham cases. It must be remembered, however, that the figures include all of Butte, while only two Bingham mines are considered. It is pointed out that there is not a citizen of Salt Lake but what on some day of the year has relatives or friends visiting here, or who is corresponding with friends or relatives over the world, and if they would give these facts on all such occasions the gospel of Utah's greatness as a mineral State would be spread in a measure in proportion to its merits.

#### UTAH COPPER OUTPUT.

Copper Produced During Last June Greatly Exceeded Expectations.

Figures recently obtained indicate that the copper output of Utah in June was considerably larger than at first estimated, says an eastern paper. The Garfield smelter of the American Smelt-

timated, says an eastern paper. The Garfield smelter of the American Smelting & Refining company turned out almost 4,000,000 pounds; United States Smelting, Refining & Mining company, 3,750,000 pounds; Utah Consolidated, 1,350,000 pounds and Bingham Consolidated, 600,000 pounds for the month.

During the present month the United States company should reach the 4,000,000 pound mark. This company is getting the matte from the Yampa smelter in Bingham containing approximately 500,000 pounds of copper and the matte product of the Ogden Smelting company at Ogden, amounting to about 100,000 pounds. The Utah & Eastern Copper company operating a small plant near St. George, Utah, is also sending its matte product to the United States company. During June, about 15,000,000 pounds of lead was produced, of which amount 7,000,000 pounds came from the lead smelter of the American Smelting & Refining at Murray. American Smelting & Refining at Mur

There has been a slight falling off in the output of the Utab Consolidated which is due to the fact that the company has been treating some lower grade ore. In May, the Utah Consoli-dated produced about 1,200,000 pounds

#### UTE COPPER COMPANY.

Three Tunnels That Should Open Great Property Being Driven.

ed, and results are not expected until a given amount of work has been accomplished, is the way in which the Uts Copper officials meet all inquiry regarding the condition of mine affairs. The campaign of exploration has been mapped out by the company, and no effort is made to rush results unbeen mapped out by the company, and no effort is made to rush results unduly, but visitors from Bingham are authority for the statement that surpfises are more than likely to be in store for the management. The past usefulness of the property, and the large amount of unexplored territory within these boundary lines, create the impression that ore developments are practically certain to arrive before anticipated.

ticipated.
Superintendent G. S. Williams is rush
under the Weir tunnel ing work ahead in the Weir tunnel, now in about 800 feet. It will be re-called that this tunnel was driven years called that this tunnel was driven years ago, and up to about a week ago the management was occupied in placing this working into shape for present use. The face is being sent upon its oreoponing mission now, and it is undersfood that excellent progress is being made. Two additional tunnels are bemade. Two additional tunnels are being sent into the mountain, all three being so aimed that when they have finished the task set before them there will be no further doubt regarding the mineral possibilities of the property. President Thomas Weir is now abroad, and knowing ones are of the opinion that he has timed his return so as to be able to perceive splendid improvements in the mine.

### GOLDEN CON.

New Company Formed to Work in the

Golden Mining District.

The Golden Consolidated Mining company was organized in this city to operate a group of seven claims which they own and which lie in the Golden mining district of Nevada. The company is capitalized for one million shares, par value \$1, with two hundred and fifty thousand shares in the treasury. The officers of the company are Henry C. Hoffman, president; Edward B. Hoffman, vice-president; Winfield Booker, secretary and treasurer. The other directors of the company are Lewis S. Hoffman and M. R. Ostrouich. The property has been partly developed by Hoffman Bros., a shaft having been sunk 100 feet and a drift run, crosscutting a large body of ore, which assays \$40 in silver and \$20.60 in gold. The company will push development work and start to shipping ore as soon as possible. Golden Mining District.

The Metal Market. The metal quotations for Saturday, posted by McCornick & Co., were as follows: Silver, 683cc; lead, \$5:25; copper castings, 211/4c; copper cathodes, 211/4c.

DAY ON 'CHANGE.

Saturday's Session Closed Very Satisfactory Week in Stock Dealings. Saturday morning's session on the exchange closed a most gratifying week's business. During the week 447,777 shares were sold, for which was checked out the aum of \$422,687.26 by the local talent. Saturday morning a total of 38,460 shares passed hands, representing a market value of \$31,075. The following were the unlisted and listed stock transactions yesterday:

# **WILL SINK BELOW** PRESENT LEVEL

Lower Mammoth Company to Begin Sinking From the Seventeenth Level.

NOW ON THE TOP OF MAIN RESOURCES

Work Full of Significance and Will Be Watched With Interest.

A plan of development work is to be inaugurated the first days of the present week by the management of the Lower Mammoth company at Tintic, which should result in developments of great significance and interest. This which should result in developments of great significance and interest. This plan is no less than that of sending the Lower Mammoth workings to depths from the 1700-foot level. This work will result splendidly, for the reason that those who have seen the 1700 level state unreservedly that this level exposed merely the top of the main ore reserves of the mine, and with depth the chutes on this level should be exceeded in every way.

the chutes on this level should be exceeded in every way.

Manager John Dern on Saturday vouched for the word that sinking from the 1700-foot level would be started tomorrow or soon thereafter. Mr. Dern is saying very little about the Lower Manmoth, preferring results to do the talking, and he was unwilling to give the proportions on the ore bedies upon the lower level. But as the 1700-foot level cannot last forever, and stockholders state positively that the campaign of dividends will be maintained indefinitely, it is pretty safe to predict that the indications on the 1700 level are such as to create no doubt whatever as to developments beneath. The Lower Mammoth is a great mine, and the public generally appreciates what its present achievements mean to Utah and the mining industry.

and the mining industry.

The new powerful hoist for the property is now coming west from the factory, and the dividend for July already has been provided for by the directors.

#### BEAVER COUNTY ORE Little Trouble Experienced in Finding

Good Rock in County. Special to The Tribune.

Special to The Tribune.

MILFORD, Utah, July 20.—Milford is just beginning to awake from a long slumber and to discover that there is ore in plenty all around here. Of course, the Cactus, Hub, Cave, and other properties were known to be very rich, and their shipments gave some slight evidence of the extent of the veins, but of late others have been investigating and are discovering that these well-known producers are not the only ones.

these well-known producers are not the only ones.

J. M. Reynolds of Salt Lake is making a shipment of ore from the Heela, which lies in the hills about ten miles east of Milford. He has eight men at work, and has now been working ninety days. In that time he has accumulated forty tons of ore, which assays \$100 per ton. The ore contains gold, silver and lead. The vein, which is over three feet wide, contains in places 20 per cent lead, and the gold values are good. The ore has a great excess of iron, and practically no silver.

Abe Farthingham is loading a car with ore brought from the King of the Hills, which is on the east side of the range, between Beaver and Milford. This is the initial shipment, and regular shipments will be made from now on. The present shipment amounts to forty tons of one worth \$40 per ton. on. The present shipment amounts to forty tons of ore, worth \$40 per ton. A short time ago some prospectors in the hills on the east side ran onto a vein of lead and silver five feet wide. Pieces of the rock, a couple of feet square, were brought to town and put on exhibition. They seem to be half metal. The property is owned by Christie Lee of Elsinore, Jack Smithson, Dave Smithson and Harry Keate of Milford. Preparations for making an extensive campaign are almost completed, and work will be commenced in a few days.

These are but a few of many instances. In short, it seems as if a man can sink anywhere and find ore. Word comes from Virgin, about twenty miles east of St. George, that copper has been discovered on a ranch near there, and \$20,000 has been offered the farmer for twenty acres of land.

#### SUCCESS COMPANY.

Duck Creek Mine Secures Services of Good Mining Man.

Good Mining Man.

Robert A Baird has been appointed foreman at the Success mines on Duck creek, controlled by Senator Thomas Kearns and David Keith of Salt Lake, and loft yesterday in company with Manager D. C. McDonald to assume the duties connected with his new position. Mr. Baird has had years of experience in mining, and all his knowledge of the business is practical. For the last three years he has been mining in the southern country, and now owns a valuable group of claims at Phonolite, says the Ely Expositor. During his absence McDonald will take occasion to inspect the progress made along development lines, and arrange for future work on the properties. About twenty-five men are on the payroll. The directors of the company have been contemplating the driving of a tunnel through the mountain, which will tap the ore bodies at great depth. great depth.

Mining Notes.

A. J. Bettles, mill manager for the Boston Consolidated company, has re-turned from an inspection of the plant at Garfield, where fine progress is be-ing made in gathering together the equipment.

Col. E. A. Wall, accompanied by Mrs. Wall, returned Friday evening from a very enjoyable trip throughout various Eastern centers of interest.

Eastern centers of interest.

The values from the Nevada Fairview rich streak ran in gold and silver as follows: Gold, 88 ounces; silver, 349.1 ounces; the second assayed 1.04 ounces gold, and 798.4 ounces silver to the ton. Superintendent Williams reported Saturday that the vein is 3½ feet wide, 20 inches of which is this high-grade character of rock.

John J. Daly and Mr. Lambourne of Salt Lake City were at Midway on Wednesday looking over the Snake Creek Mining district in company with William Van Wagoner. In all probability we shall hear something drep in this district in the near future.

# HANNIPAH WORK IS GOING AHEAD AGAIN

Damage by Recent Fire Was Not So Serious as First Anticipated.

Local stockholders in the Hannipah Mining company are delighted to learn that the damage to the property near Tonopah several weeks ago by fire was much less than was anticipated at the time the first reports came in. The mine management sent word several days ago that active operations were to start up again at a given date, and that date having passed by without any information to the contrary, it is taken for granted that the programme was carried out to the letter. The damage to the property, including machinery, is not thought to exceed \$1000, while nearly three times that smount barely was saved in cordwood alone.

The Hannipah is a close organization, being controlled by some of the strongest mining interests in the West, Samuel Newhouse and associates. The property is generally conceded to be one of splendid promise, development at depth alone being considered necessary to show a producer of large proportions. At the time of the fire it was feared that the injury to the machinery would cause the waters to drown the workings to a very injurious extent, but fortunted. time the first reports came in. The to a very injurious extent, but fortu-nately this was not the case. The use-fulness of the property has not been re-tarded or impaired in the least.
